Make model with nn.Module class

Before we start,
let's remind yesterday's code

Base .ipynb :

`https://git.io/aibd-mlp-3`

Make model with nn.Module class

1. Library Importation & Device Preparation

```python
# Library Importation
import matplotlib.pyplot as plt
import numpy as np
import seaborn as sns
import time
import torch
import torch.nn as nn
import torch.nn.functional as F

from IPython.display import clear_output
from multiprocessing import cpu_count
from sklearn.metrics import confusion_matrix
from torch.optim import SGD
from torch.utils.data import DataLoader, random_split
from torchvision.datasets import MNIST
from torchvision.transforms import ToTensor

MNIST.resources = [
  (
    'https://ossci-datasets.s3.amazonaws.com/mnist/train-images-idx3-ubyte.gz',
    'f68b3c2dcbeaaa9fbdd348bbdeb94873'
  ), (
    'https://ossci-datasets.s3.amazonaws.com/mnist/train-labels-idx1-ubyte.gz',
    'd53e105ee54ea40749a09fcbcd1e9432'
  ), (
    'https://ossci-datasets.s3.amazonaws.com/mnist/t10k-images-idx3-ubyte.gz',
    '9fb629c4189551a2d022fa330f9573f3'
  ), (
    'https://ossci-datasets.s3.amazonaws.com/mnist/t10k-labels-idx1-ubyte.gz',
    'ec29112dd5afa0611ce80d1b7f02629c'
  )
]

# Device Preparation
device = torch.device("cuda:0" if torch.cuda.is_available() else "cpu")
print(f'{"CPU" if device == "cpu" else "GPU"} will be used in training/validation.')
```

Make model with nn.Module class

2. Hyper-Parameters

```
# Data Loader
batch_size = 32

# Model
hidden_layer = 200

# Learning
logging_dispfig = True
maximum_epoch = 25
learning_rate = 0.1
```

Make model with nn.Module class

3. Data Load
   & Preprocessing

```python
# Load dataset into python variable
train_data = MNIST("./", train=True, transform=ToTensor(), target_transform=None, download=True)
train_data, valid_data = random_split(train_data, [54000, 6000])
test_data = MNIST("./", train=False, transform=ToTensor(), target_transform=None, download=True)

# Check the data
print('==================== Check the data ========================₩n')
print(f'Train dataset length = {len(train_data)}')
print(f'Valid dataset length = {len(valid_data)}')
print(f'Test dataset length = {len(test_data)}₩n')

train_0_x, train_0_y = train_data[0]
print(f'Content of Y (Label, type={type(train_0_y)}) = {train_0_y}')
print(f'Shape of X (Data, type={type(train_0_x)}) = {train_0_x.shape}')
plt.figure(1)
plt.imshow(train_0_x.squeeze())
plt.title(f'train_0_x ({train_0_x.squeeze().shape})')
plt.show()

# Create data loader
train_loader = DataLoader(train_data, batch_size=batch_size, shuffle=True, pin_memory=True,
                          drop_last=True)
valid_loader = DataLoader(valid_data, batch_size=len(valid_data), pin_memory=True)
test_loader = DataLoader(test_data, batch_size=len(test_data), pin_memory=True)

# Examine the data loader
print('================== Check the data loader ====================₩n')
train_enumerator = enumerate(train_loader)
ex_batch_idx, (ex_data, ex_label) = next(train_enumerator)
print(f'Idx: {ex_batch_idx} / X.shape = {ex_data.shape} / Y.shape = {ex_label.shape}₩n')
print(f'Y[0:{batch_size}] = {ex_label}')

preview_index = 0
plt.figure(2)
plt.imshow(ex_data[preview_index, 0, :, :])
plt.title(f'Batch example data [{preview_index}, label={ex_label[preview_index]}]')
plt.show()
```

Make model with nn.Module class

4. Function Definitions

```
1  # Model
2  def init_model(_net):
3      global net, loss_fn, optim
4      net = _net.to(device)
5      loss_fn = nn.CrossEntropyLoss()
6      optim = SGD(net.parameters(), lr=learning_rate)
7
8  # Epoch
9  def init_epoch():
10     global epoch_cnt
11     epoch_cnt = 0
12
```

Make model with nn.Module class

4. Function Definitions (continue)

IMPORTANT!

```python
def epoch(data_loader):
    # One epoch : gets data_loader as input and returns loss / accuracy, and
    #             last prediction value / its label(truth) value for future use
    global epoch_cnt
    iter_loss, iter_acc = [], []

    last_out, last_label = None, None
    last_grad_performed = False

    # Mini-batch iterations
    for _data, _label in data_loader:
        data, label = _data.view([len(_data), -1]).to(device), _label.to(device)

        # 1. Feed-forward
        onehot_out = net(data)

        # 2. Calculate accuracy
        _, out = torch.max(onehot_out, 1)
        acc_partial = (out == label).float().sum()
        acc_partial = acc_partial / len(label)
        iter_acc.append(acc_partial.item())

        # 3. Calculate loss
        loss = loss_fn(onehot_out, label)
        iter_loss.append(loss.item())

        # 4. Backward propagation if not in 'torch.no_grad()'
        if onehot_out.requires_grad:
            optim.zero_grad()
            loss.backward()
            optim.step()
            last_grad_performed = True

        # 5. Save current iteration data for future use
        last_out = out.cpu().detach()
        last_label = _label
```

Make model with nn.Module class

4. Function Definitions (continue)

```
51      # Up epoch count if backward propagation is done
52      if last_grad_performed:
53          epoch_cnt += 1
54
55      return np.average(iter_loss), np.average(iter_acc), last_out, last_label
56
57
58  def epoch_not_finished():
59      # For now, let's repeat training fixed times, e.g. 25 times.
60      # We will learn how to determine training stop or continue later.
61      return epoch_cnt < maximum_epoch
```

Make model with nn.Module class

5. Model Architectures (before)

```
# before

net = nn.Linear(1, 1)

net = nn.Sequential(
    nn.Linear(len(train_0_x.view([-1])), hidden_layer, bias=False),
    nn.ReLU(),
    nn.Linear(hidden_layer, 10, bias=False)
  ).to(device)
```

Make model with nn.Module class

6. Training Iteration & Test Result

```python
# Model
def init_model(_net):
    global net, loss_fn, optim
    net = _net.to(device)
    loss_fn = nn.CrossEntropyLoss()
    optim = SGD(net.parameters(), lr=learning_rate)
```

```python
# Training Initialization
init_model(OneLayerModel())
init_epoch()
init_log()

# Training Iteration
while epoch_not_finished():
    start_time = time.time()
    tloss, tacc, _, _ = epoch(train_loader)
    end_time = time.time()
    time_taken = end_time - start_time
    record_train_log(tloss, tacc, time_taken)
    with torch.no_grad():
        vloss, vacc, _, _ = epoch(valid_loader)
        record_valid_log(vloss, vacc)
    print_log()

print('\n Training completed!')

# Accuracy for test dataset
with torch.no_grad():
    test_loss, test_acc, test_out, test_label = epoch(test_loader)
    print('\n====================== Test Result ======================\n')
    print(f'Test accuracy = {test_acc}\nTest loss = {test_loss}')
```

Make model with nn.Module class

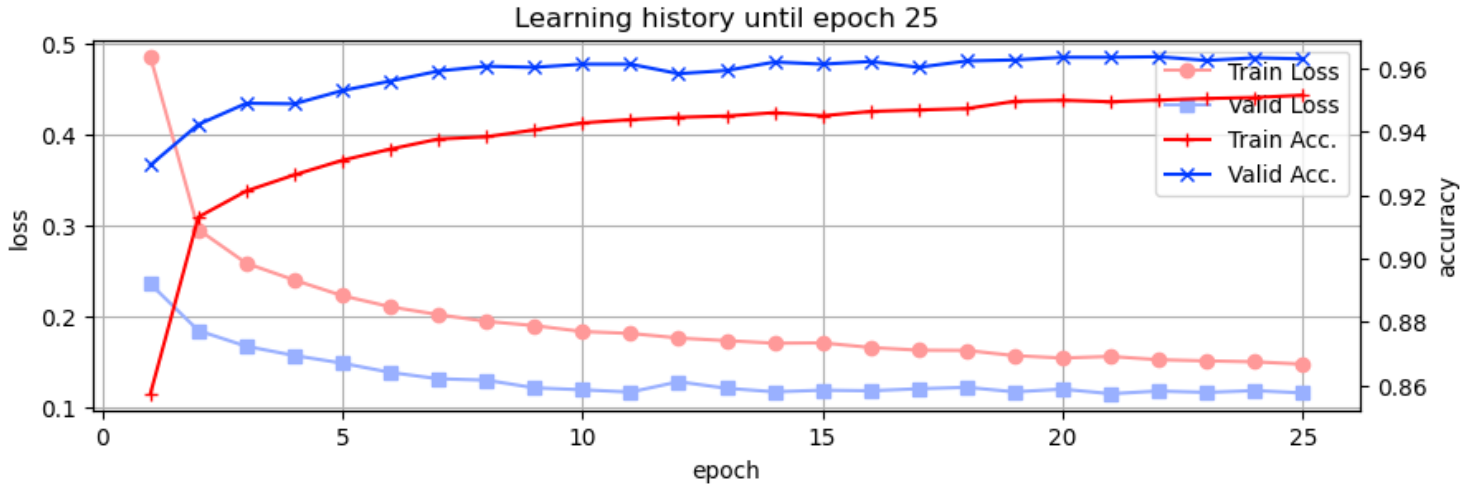
Anything Strange?



```
====================== Test Result ======================

Test accuracy = 0.9611999988555908
Test loss = 0.13464893400669098
```

Batch Normalization + Dropout

Make
your own
Model !

Batch Normalization + Dropout

```python
class MLPDropout(nn.Module):
    def __init__(self, in_features, out_features):
        super(MLPDropout, self).__init__()

        self.hidden_layer1 = 165
        self.hidden_layer2 = 165
        self.dropout_rate = 0.2

        self.layer1 = nn.Sequential(
            nn.Linear(in_features, self.hidden_layer1),
            nn.BatchNorm1d(self.hidden_layer1),
            nn.ReLU(),
            nn.Dropout(self.dropout_rate)
        )
        self.layer2 = nn.Sequential(
            nn.Linear(self.hidden_layer1, self.hidden_layer2),
            nn.BatchNorm1d(self.hidden_layer2),
            nn.ReLU(),
            nn.Dropout(self.dropout_rate)
        )
        self.out_layer = nn.Linear(self.hidden_layer2, out_features)

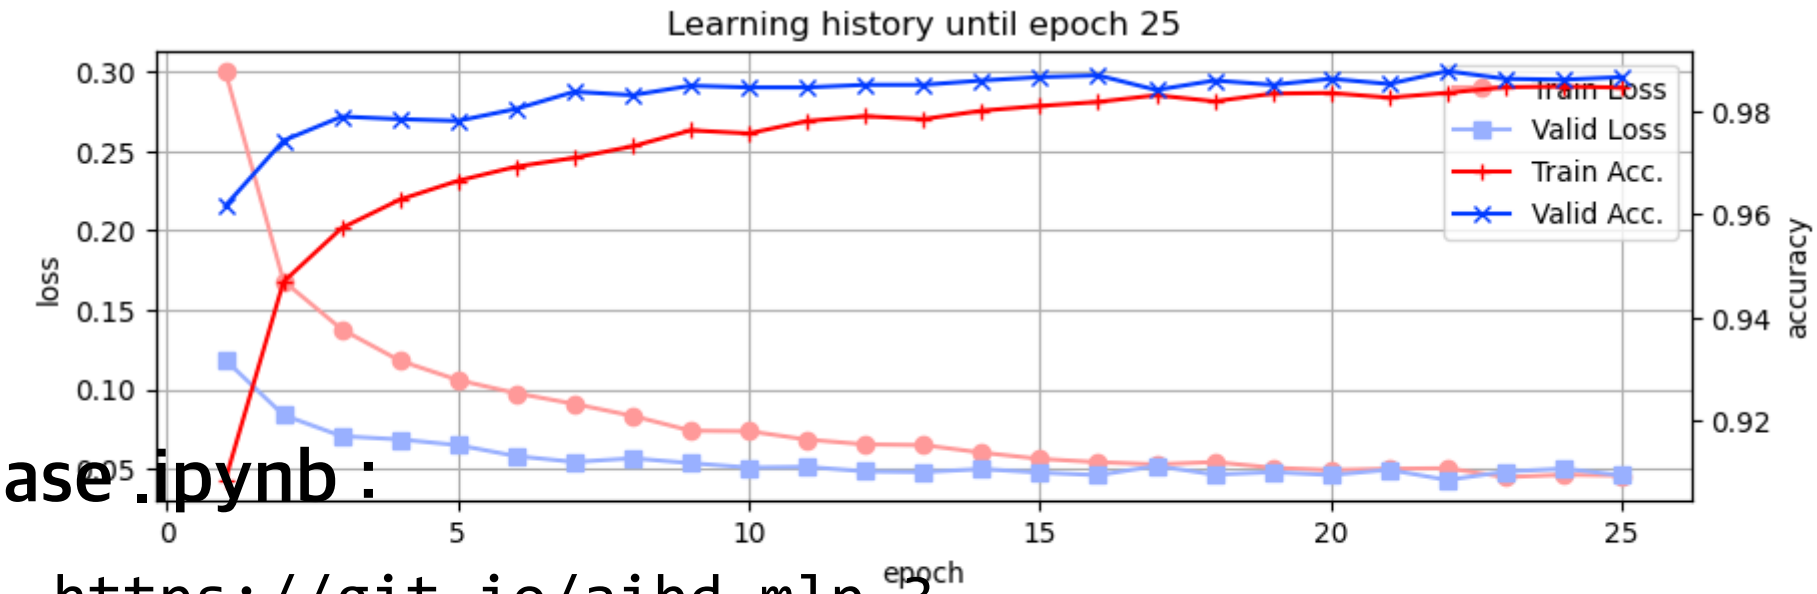
    def forward(self, x):

        hidden1 = self.layer1(x)
        hidden2 = self.layer2(hidden1)

        onehot_out = self.out_layer(hidden2)

        return onehot_out
```

Batch Normalization + Dropout



Base.ipynb :

https://git.io/aibd-mlp-3

```
Iter:    25 >> T_loss 0.04564    T_acc 0.98463    V_loss 0.04580    V_acc 0.98667    3.829s

 Training completed!

====================== Test Result ======================

Test accuracy = 0.9837999939918518
Test loss = 0.053974274545907974
```

Better?
